PROFESSIONAL SUMMARY

Business Intelligence (BI) Developer and Data Analyst with nearly 4 years of experience building Power BI dashboards and data visualizations with SQL, DAX (Data Analysis Expressions), and Azure Databricks. Built self-service reports for 700+ users, combined 30+ reports into one dashboard, and led the migration of 200+ reports and 250+ semantic models from Power BI Report Server to Power BI Service. Comfortable with ETL (Extract, Transform, Load) pipelines, dimensional modeling, and data governance, and used to working with Sales and Marketing stakeholders. MS in Data Science; AWS Certified Machine Learning – Specialty.

TECHNICAL SKILLS

BI & Visualization	Power BI (Desktop, Service, Report Server), Power Query, Data Visualization, Semantic Models, Executive Dashboards, Interactive Dashboards, Drill-Down Reporting, KPI (Key Performance Indicator) Tracking, Custom Visuals, Data Blending, Self-Service Analytics, Ad-Hoc Reporting, Data Analysis
Programming	SQL (Advanced), Query Optimization, DAX, Python (Advanced), PySpark (Advanced), Bash
ETL & Data Engineering	Azure Databricks, Azure Data Factory, Alteryx, ETL, Medallion Architecture, Delta Tables, Data Ingestion Pipelines, Data Transformation
Data Modeling	Dimensional, Relational, Star Schema, Snowflake Schema, Physical & Logical Modeling
Data Platforms	Snowflake (Cloud Data Warehouse), SQL Server, SAP BW (Business Warehouse), SAP APO (Advanced Planning and Optimization)
Governance & Quality	Row-Level Security (RLS), Deployment Pipelines, Incremental Refresh, Data Quality, Data Validation, Data Reconciliation, HIPAA (Health Insurance Portability and Accountability Act) Compliance
BI Administration	Power BI Report Server Administration, Report Migration, Data Gateway Configuration, Workspace Governance, License Management, User Access Management, Performance Tuning
AI & Machine Learning	LangChain, LangGraph, RAG (Retrieval-Augmented Generation), Multi-Agent Systems, Prompt Engineering, LLM (Large Language Model) Fine-Tuning, Clustering, PyTorch
DevOps & Tools	Git (Version Control), Docker, Kubernetes, FastAPI, MLflow, CI/CD (Continuous Integration/Continuous Delivery), Excel
Methodologies	Agile, Scrum, Sprint Planning, Business Requirements Gathering, BRDs (Business Requirements Documents), Stakeholder Management

PROFESSIONAL EXPERIENCE

Community Dreams Foundation
Sep 2025 – Jul 2026

Data Analyst
Remote

- Reconciled dashboards against source databases with SQL validation queries to confirm data quality across enterprise BI reports.
- Standardized BI frameworks across departments, cutting ad-hoc reporting requests and improving efficiency.
- Built a multi-agent analytics system in Python and LangChain. Four specialized agents process biomedical data and generate recommendations for 5,000+ users.
- Gathered clinical-workflow requirements from healthcare experts and product stakeholders and turned them into technical specifications that meet HIPAA security and regulatory rules.

Camping World – Good Sam
Jun 2023 – Sep 2023

Data Analyst (Summer Intern)
Chicago, IL

- Enhanced an enterprise Power BI dashboard with custom DAX metrics for real-time KPI monitoring, which reduced reporting time for 30+ executives.
- Built dashboards and data visualizations that blend data from several sources, with Row-Level Security (RLS) and custom visuals for specific reporting needs.
- Partnered with the data engineering team to migrate legacy databases to Snowflake using SQL Server, Power BI, and Excel, validating data accuracy across migrated systems.
- Developed a clustering model that grouped 10,000+ recreational vehicle (RV) floorplans into 344 categories at 85% similarity, showing how floorplan type affects sales and informing sales strategy and customer recommendations.

Maestro Intellect Private Limited
Jul 2019 – Jul 2022

BI Developer
India

- Gathered business requirements through BRDs (Business Requirements Documents), turned business rules into analytics specifications, and delivered executive Power BI dashboards end to end.
- Consolidated 30+ reports into one interactive Power BI dashboard, which simplified KPI tracking and executive reporting.

- Optimized Power BI dashboard performance with efficient DAX, query optimization, and extract tuning, which improved load times and the user experience.
- Designed drill-down dashboards for customer demographics and regional performance, giving 700+ users across the USA self-service analytics for their own decisions.
- Integrated Azure Databricks ETL pipelines into Marketing campaign tracking and KPI dashboards so marketers could follow campaign progress, spending, and performance.
- Created sales performance dashboards covering targets, achievement trends, and e-commerce sales across India, helping regional teams track results and spot opportunities.
- Administered Power BI Report Server, including user permissions, project structures, data connections, and extract refresh schedules.
- Followed Agile practices (daily stand-ups, sprint planning, retrospectives) and delivered analytics in increments.

ACADEMIC EXPERIENCE

University of Massachusetts Dartmouth – DSC 520 Sep 2024 – May 2025
Teaching Assistant, High Performance Scientific Computing Dartmouth, MA

- Mentored 75+ graduate students on PyTorch, Python optimization, and High-Performance Computing (HPC) topics such as parallel processing and multicore systems.

Digital Scholarship Hub, UMass Dartmouth Dec 2023 – Aug 2024
Data Instructor Dartmouth, MA

- Taught hands-on workshops on GIS (Geographic Information Systems), machine learning, data visualization, SQL, and LangChain for faculty, students, and non-technical staff, and wrote open-access guides for Git, data analysis, and geospatial workflows.

University of Massachusetts Dartmouth – CIS 190 Sep 2023 – Dec 2023
Teaching Assistant, C Programming Dartmouth, MA

- Led hands-on C programming labs for 100+ undergraduates and graded assignments.

KEY PROJECTS

Enterprise Power BI Report Server to Cloud Migration | Power BI Service, DAX, SQL, RLS

- Migrated 200+ reports and 250+ semantic models from on-premises Power BI Report Server to Power BI Service for an environment of 18,000+ users, and narrowed licensing to 900 active users after a workspace usage analysis.
- Led migration planning: dependency analysis, data gateway configuration, and a coordinated production cutover with zero reporting downtime.
- Rebuilt RLS roles, converted calculated columns to optimized DAX measures, consolidated redundant reports, and standardized workspace governance with deployment pipelines and incremental refresh policies. This reduced technical debt and removed the on-premises server dependency.

EDUCATION

Master of Science in Data Science May 2025
University of Massachusetts Dartmouth · Dartmouth, MA · GPA: 3.95/4.0

- Thesis: Rapid Insight Data Engine: Open-Source Framework for Agentic Automated Tabular Data Analysis

Bachelor of Engineering in Computer Science May 2019
G.H. Raisoni College of Engineering · Nagpur, India

- Industry Project: Smart Restaurant Automation System, an Internet of Things (IoT)-based ordering system built with Python, MySQL, and RESTful APIs (Application Programming Interfaces)

CERTIFICATIONS & PROFESSIONAL DEVELOPMENT

- AWS Certified Machine Learning – Specialty (2025)
- Data Carpentry Certified Instructor (The Carpentries)
- Machine Learning Specialization, Stanford Online and DeepLearning.AI (Coursework)
